MEMORANDUM FOR THE RECORD

SUBJECT: [] SR112 Film Study

REFERENCES: Air Force R&D Work Order Report #330-68

1. SR112 is a [] low gamma reproduction film designed to compete with [] S0347. Since initial evaluation showed that standard D-19 processing gave higher gamma than stated, additional testing was considered as unwarranted.

2. [] holds that with special [] chemistry, low gamma processing is obtained. However, [] D-19 chemistry is standard in the processing community and additional chemistry would require special purchase, stocking, etc. (NOTE: [] SR-100 does appear to be competitive with medium gamma [] 2430.)
